Editor's Note: EarthBeat Weekly is your weekly newsletter about faith and climate change. Below is the Sept. 10 edition. To receive EarthBeat Weekly in your inbox, <u>sign up here</u>.

This week, Pope Francis and two other Christian faith leaders — Ecumenical Patriarch Bartholomew of Constantinople, who has long spoken out on environmental issues, and Justin Welby, Anglican archbishop of Canterbury — called on "everyone, whatever their belief or worldview, to endeavour to listen to the cry of the earth and of people who are poor, examining their behaviour and pledging meaningful sacrifices for the sake of the earth which God has given us."

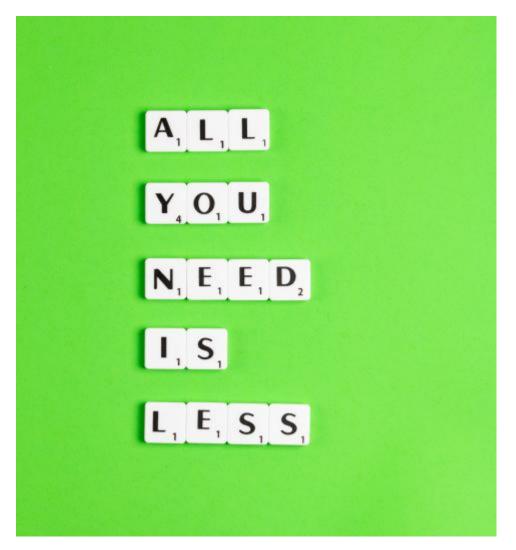

In the face of the continuing coronavirus pandemic and the weather disasters associated with climate change, they <u>issued a first-ever joint message</u> for the Season of Creation, urging the world's people to "choose life," that future generations may also live, reports Carol Glatz for Catholic News Service.

The trio of faith leaders reminds us that the cascading impacts of a warming climate, along with the pandemic, disproportionately affect those who have the least economic and political power. They also call for both personal conversion and a change in our global economic system:

Each of us, individually, must take responsibility for the ways we use our resources. This path requires an ever-closer collaboration among all churches in their commitment to care for creation. Together, as communities, churches, cities and nations, we must change route and discover new ways of working together to break down the traditional barriers between peoples, to stop competing for resources and start collaborating. Those responsible for managing finances, they say, must "choose people-centred profits; make short-term sacrifices to safeguard all our futures; become leaders in the transition to just and sustainable economies."

Whenever I ask a Christian climate activist or a climate scientist what individuals can do that make the most difference for the climate, one of the first answers is "vote." Our political choices shape local, regional and national policies to reduce our countries' greenhouse gas emissions.

Closely related to that is political advocacy — staying abreast of local, state and national policies and calling or writing to government officials to urge them to act on climate issues.

Faith-based environmental groups have been <u>doing that kind of advocacy recently</u>, calling for Congress to approve a \$1.2 trillion infrastructure bill that has passed the Senate with bipartisan support and a \$3.5 trillion budget reconciliation bill that is currently being crafted, reports NCR environment correspondent Brian Roewe. The faith groups said the bills represent "the most important political window on climate action that we have ever faced."

Pope Francis, Patriarch Bartholomew and the archbishop of Canterbury wrote that for the sake of young people, who feel their future is threatened, "we must choose to eat, travel, spend, invest and live differently, thinking not only of immediate interest and gains but also of future benefits."

Making lifestyle changes requires long-term commitment, and prayer sustains us on the journey. In this week's <u>"At Home in Creation" reflections</u>, Brenna Davis and Michael Downs of the Ignatian Solidarity Network remind us that even ordinary places are holy ground, encouraging us to visit places that hold special meaning and leading us through reflections that invite us to take action.

And if you're looking for more ways to take personal action to care for our common home, Creation Justice Ministries offers <u>an idea a week</u>.

"Choosing life means making sacrifices and exercising self-restraint," the three Christian leaders wrote in their joint message. "All of us — whoever and wherever we are — can play a part in changing our collective response to the unprecedented threat of climate change and environmental degradation."

What we hear from EarthBeat's readers:

Gene Swain of Calgary, Alberta, Canada, wrote to say we are overlooking a key factor in environmental degradation:

That is overpopulation. ... A century ago, with a population of less than 2 billion, we were beginning to do harm to the Garden with our overuse of fossil fuels for industry, food production and travel. Today, with four times the population, and still growing unchecked, we are destroying Earth's ability to sustain human, and most larger animal species', lives and yet we

continue to promote "growth" both of population and resource usage. This must stop!

Continual growth is absolutely unsustainable and has to be reversed. Today, we are using at least 150% of Earth's ability to replace its renewable resources, to say nothing of our use of non-renewables. ... Religious leaders do nothing to help the situation. The Catholic church, in particular, continues to call any kind of effective birth control sinful. In my opinion, it is not only not sin, but a vital necessity.

With the present societal attitude, I think the only likely solution to overpopulation will be Nature. ... I expect COVID-19, and other drug-resistant diseases to be only a hint of what is to come. Though I am too old to matter, my grandchildren and great-grandchildren face a bleak future.

Here's what else is new on EarthBeat:

- Indigenous leaders in Louisiana's rural Delta region fear their scattered communities will be <u>overlooked by aid agencies</u> in the aftermath of Hurricane Ida, writes Emily McFarlan Miller for Religion News Service. And Rhina Guidos of Catholic News Service reports that in New Orleans, <u>three people died</u> in buildings operated by an archdiocesan housing ministry, when they were left without power after the powerful storm.
- Oil company public relations messages claiming to be more environmentally friendly are actually delaying tactics that amount to being <u>the new climate</u> <u>science denialism</u>, writes Amy Westervelt for The Guardian as part of the Covering Climate Now consortium.
- Also for Covering Climate Now, Liz Kimbrough at Mongabay writes about a new study showing that protecting marshes that help buffer against hurricanes and other severe storms could save as much as \$38 million per estuary in storm damages.

Here's some of what's new in other climate news:

- Derek Gatopoulos at the Associated Press reports that Greece, which battled devastating wildfires in recent months, has created a <u>new ministry to address</u> <u>the impacts of climate change</u>, naming former European Union commissioner Christos Stylianides as minister of climate crisis and civil protection.
- A study found that taken together, five large agriculture and food companies that produce meat and milk <u>generate more greenhouse gas emissions</u> than a major oil company, reports Christian Spencer for The Hill.
- Spurred by the climate crisis, young people are <u>flocking to environmental</u> <u>careers</u>, reports Angela Lashbrook for The Guardian. Meanwhile, their elders have joined together in the group Grannies for Future to <u>raise awareness</u> <u>among older generations</u> and advocate for climate action, write Natalie Muller and Neil King at Deutsche Welle.
- Liza Gross at Inside Climate News writes that small-scale, climate-friendly farming can reduce agriculture's carbon footprint, but <u>U.S. farm policy favors</u> industrial-scale operations mainly growing commodity crops like soy and corn.
- Some researchers consider air pollution the world's greatest public health risk, but Joseph Winters at Grist reports that many countries are <u>doing too little to</u> <u>address it</u>.

Upcoming events:

A virtual three-part speaker series, "<u>What Must be Done? Vincentian Family</u> <u>Perspectives on Love and Justice for Creation</u>," which begins Sept. 12, is aimed at helping participants — regardless of level of knowledge or experience — start thinking about caring for our common home.

You can find more information about this and other upcoming events on the <u>EarthBeat Events page</u>. And if your parish or faith group is scheduling an event, you can <u>add it here</u>.

Closing beat:

Is your parish or faith group taking action during this Season of Creation? If so, we'd like you to tell us about it in 150 words or less in a <u>Small Earth Story</u>.

If you enjoy EarthBeat, please spread the word — you can <u>pass along the link to</u> <u>EarthBeat Weekly</u> or suggest to friends that they <u>sign up here</u> to receive this newsletter every Friday in their inbox. Thank you for reading EarthBeat!
